

Astronomy is a magazine about the science and hobby of astronomy. Based in Waukesha, Wisconsin, it is produced by Kalmbach Publishing. Astronomys readers include those interested in astronomy, and those who want to know about sky events, observing techniques, astrophotography, + amateur astronomy in general. Astronomy was founded in 1973 by Stephen A. Walther, a graduate of the University of Wisconsin-Stevens Point and amateur astronomer. The first issue, August 1973, consisted of 48 pages with five feature articles and information about what to see in the sky that month. Issues contained astrophotos and illustrations created by astronomical artists. Walther had worked part time as a planetarium lecturer at the University of Wisconsin-Milwaukee and developed an interest in photographing constellations at an early age. Although even in childhood he was interested to obsession in Astronomy, he did so poorly in mathematics that his mother despaired that he would ever be able to earn a living. However he graduated in Journalism from the University of Wisconsin Stevens Point, and as a senior class project he created a business plan for a magazine for amateur astronomers. With the help of his brother David, he was able to bring the magazine to fruition.. He died in 1977. AstroMedia Corp., the company Walther had founded to publish Astronomy, brought in Richard Berry as editor. Berry also created the offshoot Odyssey, aimed at young readers, and the specialized Telescope Making. In 1985, Milwaukee hobby publisher Kalmbach bought Astronomy. In 1992, Richard Berry left the magazine and Robert Burnham took over as chief editor. Kalmbach discontinued Deep Sky and Telescope Making magazines and sold Odyssey. In 1996 Bonnie Gordon, now a professor at Central Arizona College, assumed the editorship. David J. Eicher, the creator of Deep Sky, became chief editor in 2002.
