

Imaging of the Foot & Ankle: Techniques and Applications (Medical Radiology / Diagnostic Imaging)

Up-to-date and comprehensive textbook on imaging of the foot and ankle. In the first part, the various techniques and procedures are discussed in detail. Individual chapters are devoted to: radiography, arthrography and tenography, computed tomography and CT arthrography, magnetic resonance imaging and MR arthrography, ultrasonography, and intra-articular injections. The second part documents the application of these techniques to diverse clinical problems and diseases, including: congenital and developmental disorders, trauma, tendon and ligament pathology, compressive neuropathies, infection, and the diabetic foot. Each chapter is written by an acknowledged expert, and a wealth of illustrative material is included.
