

Report, State Entomologist of Minnesota to the Governor Volume 12-14

**REPORT, STATE
ENTOMOLOGIST OF
MINNESOTA TO THE
GOVERNOR VOLUME 12-14**

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1908 Excerpt: ... badly troubled by cutworms; much worse than were other rows of cauliflowers treated differently. The cutworms seemed to like to work into the soot, and they were found imbedded in the soot in a large number of instances. At least one cutworm was taken away from every plant in this row. except one or two, and in some cases as many as four were taken away from a single plant. It is probable that they took to the soot in this way on account of its black color, which caused it to absorb a great deal of heat during the day and retain it during the night. On June 3d a row of 81 cauliflower plants were set out. and on June 4th every other plant in the row was treated with a batch of soot dough placed around its base. The soot covered the ground for a distance of six inches away from the plants on every side. On June 22nd 27 of the plants were pulled up and examined, and on July 20th 34 others were examined. Of the treated plants, were found to be infested and 14 free from infestation, and of the check plants 12 were found to be infested and 18 free: so general results of the treatment with soot were negative. Experiments with Lime. A row of cabbages, planted on May 14th. had the alternate plants treated on May 18th with air-slaked lime, about a trowful of the lime being used around the base of each plant. This covered the ground around the stem of the cabbage for a radius of five inches. The lime having become somewhat mixed with soil by rains, this treatment was repeated on May 28th. On June 10 plants were pulled up and examined, and on August 20th the remaining 24 were pulled up and examined. The results were entirely negative, as many of the treated plants, as

of checks, being found infested.
Experiments with Carbolic Acid and Lime.
Cauliflowers planted May 18th. below...
