

# Annals of the Astronomical Observatory of Harvard College Volume 23, no. 1

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1890 Excerpt: ...observed each month. These classes are the stars not used for determining the constants of the instrument, the star X Vrsce Minoris, the standard circumpolar stars observed at upper culmination, the same stars at lower culmination, and the entire number of stars. The numbers in the column headed B therefore equal the sums of the numbers in the four preceding columns. The average numbers of stars in each series of the first, third, and fifth of these classes are given in the next three columns. The number of observations of X and of stars at lower culmination are ordinarily two of each, unless the observations were stopped by clouds. When the series was long, the number of stars observed at lower culmination was sometimes increased. The average value of the residuals of the stars at upper culmination and of X are given in the next two columns. The second of these quantities is generally the larger, owing to the apparent or real changes in the light of X. These variations are shown in the next column, which gives the difference benumber. In forming the last three columns described above, all residuals greater than 9 are rejected, also those observations of stars at upper culmination which were rejected in deriving the constants of the series. The total time of observation and the average for each star are given in the next two columns. The first of these is found from the difference between the times of beginning and ending each series, and the last by dividing this quantity by the total number of stars given in the eighth column. These quantities are greater than the actual time of observation, owing to occasional interruptions by clouds or by other causes. The last column gives

the mean temperature, and is derived from the last column but one of Tab...
